Fuel Property Effects on Engine Emissions and Efficiency Tasks 2. Fuel and Lubricant Properties-Engine-Out Emissions Objective Quantify exhaust emission benefits of selected advanced petroleum-based fuels in an advanced automotive diesel engine, with the engine optimized to take advantage of the individual combustion characteristics of each individual fuel. Approach Three fuels shown to significantly reduce engine out emissions in the DaimlerChrysler OM611 CIDI engine during the first phase of this program, along with fuels suggested by the Ad-Hoc fuels working group, were evaluated for emissions benefits with selected engine control system optimization for each fuel. Engine-out emissions (no exhaust emission control devices) and performance were determined at a series of steady-state test modes. A partial factorial design of experiment approach was to develop a quadratic response surface model for PM, NO and fuel consumption at each speed load point as a function of the four engine operating x parameters. The resulting surface would then be...
